

MicTUBE

CONNECTS YOUR PROFESSIONAL MICROPHONE

Yet another smart little tool from Maycom. Turn your MP3 recorder, MiniDisc, walkman or portable computer into a professional reporter unit.

Most portable recorders are equipped with a rather noisy microphone pre-amp that won't give you that real clear sound your digital recorder is capable of. The line input, which is available on every portable recorder, is able to handle a much higher signal level than the microphone inputs. This will avoid brick-wall clipping which will happen when the signal fed into a microphone input is so high that it causes distortion regardless of the level settings. The Maycom MicTube contains all the electronics needed to solve this problem: a high quality balanced pre-amp with its own powersupply, Gain control, and LED level indication. Leaving you in total control of your recording.

Connect your own professional microphone directly to the line input of any recording device. It looks great and it sounds even better.

Features

- Gain control with audio level indicator
- High quality Microphone Pre-Amp
- Battery status indicator
- Mono microphone input via balanced XLR

Specifications

- Max. gain: 55 dB
- S/N ratio: > 85 dB
- THD+N: < 0.08%
- Operation time: approx. 30 hrs
- Power: 1.5V (1x AAA size battery)
- Microphone input: Mono balanced female XLR
- Line output: Dual mono unbalanced 3.5mm jack
- Frequency response: 20 Hz - 20 kHz
- Output voltage max.: 1V RMS (Line level)

To make it even more convenient Maycom composed a reporter kit containing the MicTube and the RipFlash MP3 recorder, the perfect combination to make broadcast quality recordings.
