PROFESSIONAL CF-AUDIO CARD

In today's world of news gathering, quality, speed, and availability of information is getting more and more important.

Maycom developed yet another innovative tool for the modern professional reporter: the n>trans, a high featured Compact Flash Audio Card. Together with a PDA, the n>trans is a powerful tool for today's reporter and journalist. It will enable you to make high quality recordings, use the graphical features of the PDA for Editing, and use the communication capabilities of the PDA for spreading the news around the world.

The n>trans runs on every PDA with a Compact Flash Slot, and Windows Pocket PC® Operating System. It provides a professional audio input / output for your PDA in 2 versions: the standard and the Pro. Both include nice features as Limiter, High Quality microphone preamps, balanced inputs, Phantom Power (Pro Version only), and a high power Headphone output. As an option, we supply the LUCI software, this will turn your PDA into a recorder, editor and communication center.
